[Download](#)

ShowSSL is a tool designed to help you test the strength of SSL servers by analyzing the ciphers supported. The report generated includes SSL protocol version and cypher supported, if sessionID is used and its timeout value, certificate chain e CA trusted by the serve ShowSSL Use ShowSSL to assess the strength of SSL servers and to test the cyphers they support. ShowSSL Documentation: Modifications to the makefiles generated by the Configure script (as discussed in the details section) can also be added to the top-level configuration file, if desired. To ensure that the data will be preserved and not lost, as a general rule, use the PREVIEW operation. The Wireshark Start-up Script is a tool to configure and start Wireshark. Wireshark Start-up Script Description: The Wireshark Start-up Script is a tool to configure and start Wireshark. Wireshark Start-up Script Use Wireshark Start-up Script to configure and start Wireshark. Wireshark Start-up Script Documentation: 1) Install the script. \$ chmod +x wsg_config_file ./wsg_config_file.sh 2) Extract the configuration file. \$ wsg_config_file.sh ./wsg_config_file 3) Use the configuration file to start Wireshark. \$./wireshark ./wireshark --config wsg_config_file If there are errors during configuration of the script, then you may need to check the directory permissions: \$ ls -la \$HOME/ Then check that the config file exists and is readable: \$ cat \$HOME/config_file Also, you may need to check that any scripts you've written in \$HOME have permission to execute. If there are errors during starting of Wireshark, then you may need to check the following file permissions: \$ ls -la \$HOME/wireshark/bin/wireshark If you get the following error: ERROR: No such file or directory ".wiretap/tap.c", and don't know what this means, then

----- Version.ini License: GNU General Public License (GPL) ShowSSL URL: ShowSSL URL: ShowSSL Source Code: ShowSSL Homepage: License: GNU General Public License (GPL) Thanks a lot for your helpful review. The main shortcoming you pointed out is the lack of support for CAMELLIA. I've thought about taking a look at it, but haven't got the time to do it right now. For now, I will implement a couple of things. Thanks again. The following tweaks should solve your issues. I'd recommend to implement them all. I'm not sure about the final versions, so you will have to test these solutions. Also, please, feel free to send in your support to the following support forum, where your issue might be more likely to be resolved: This tool does a good job in helping identify more common ciphers vulnerable, and most of them can be patched. Thanks a lot for your support. ShowSSL Info ShowSSL Version: Description: ----- SSL/TLS scanner that help you test the strength of SSL servers by analyzing the ciphers supported.
